

USING THE SYSTEM

Signup Form

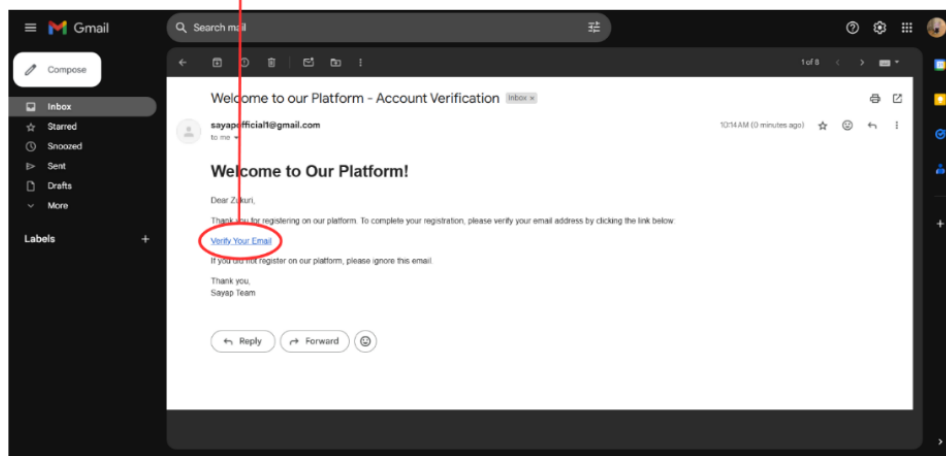

The signup form is where the user can create their account. It has buttons that guide the user to different pages and simple fields to fill out to complete their registration.

1. First Name – the user will input their first name.
2. Last Name – the user will input their last name.
3. Email – the user provides their email address for account verification.
4. Password – user creates secure password that meets the system's guidelines.
5. View Password – the user can tap the eye icon to review the password they've entered.
6. Confirm Password – the user re-enters their password to ensure it matches the one they created.
7. Sign Up – after completing all the fields, the user clicks this button to finalize their registration.

8. Email Verification Notification – a pop-up will appear confirming that a verification email has been sent.
9. Login In – if the user already has an account, they can click this button to log in.

Signup Email Verification

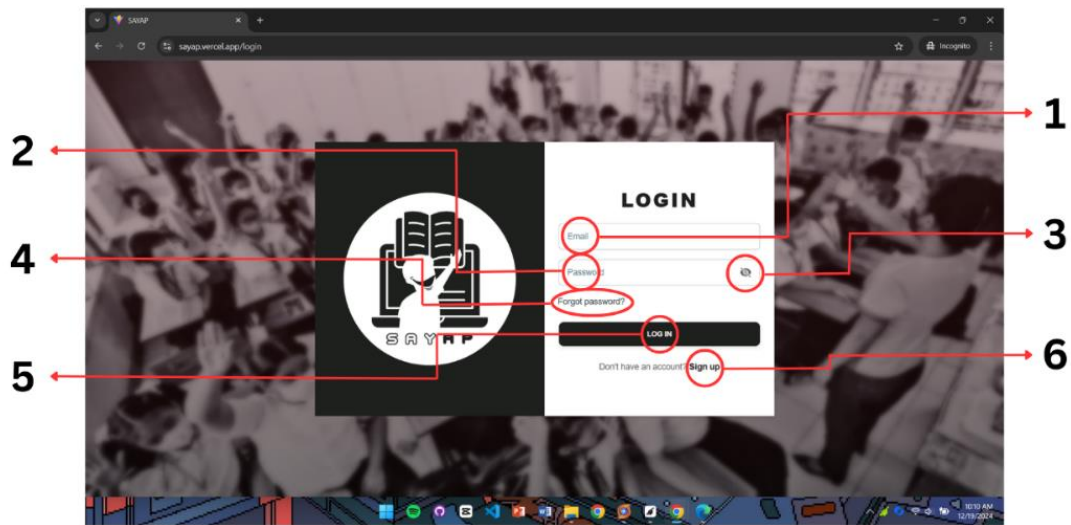

1

The user must check their inbox and follow the link sent to their provided email address to verify their account.

1. Verify Email – the user can click the provided link to complete the email verification process.

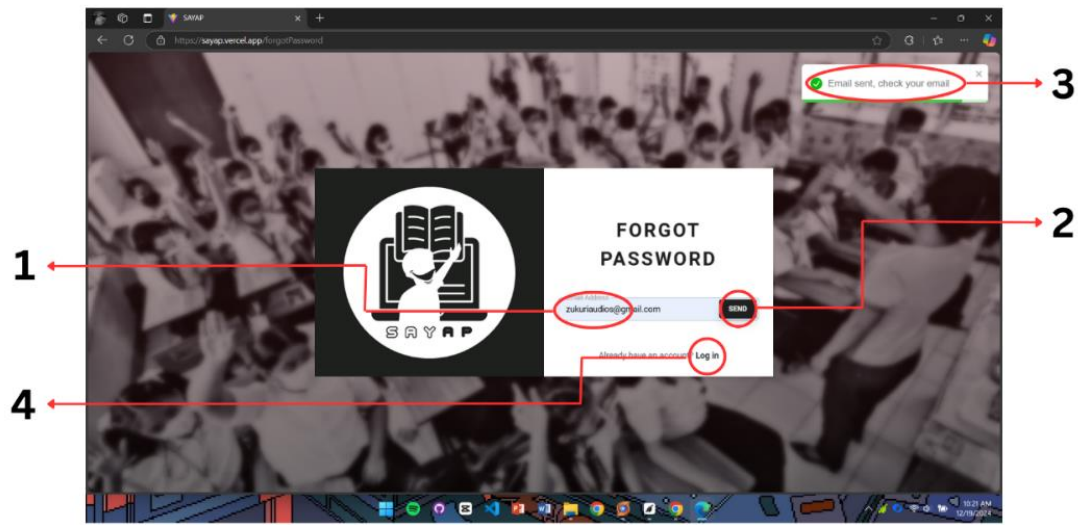

Login Form

The login form allows users to access their existing account.

1. Email – the user will enter the email associated with their account stored in the system's database.
2. Password – the user will enter the password linked to their account in the system's database.
3. View Password – the user can click the eye icon to reveal their password as they type.
4. Forgot Password – if the user have forgotten their password, they can click this button to be redirected to a recovery page/form.
5. Log In – once the form is completed, the user can click the login button to access their account.
6. Sign Up – for the users who don't have an account yet, they can click the signup now button to be directed to the signup form.

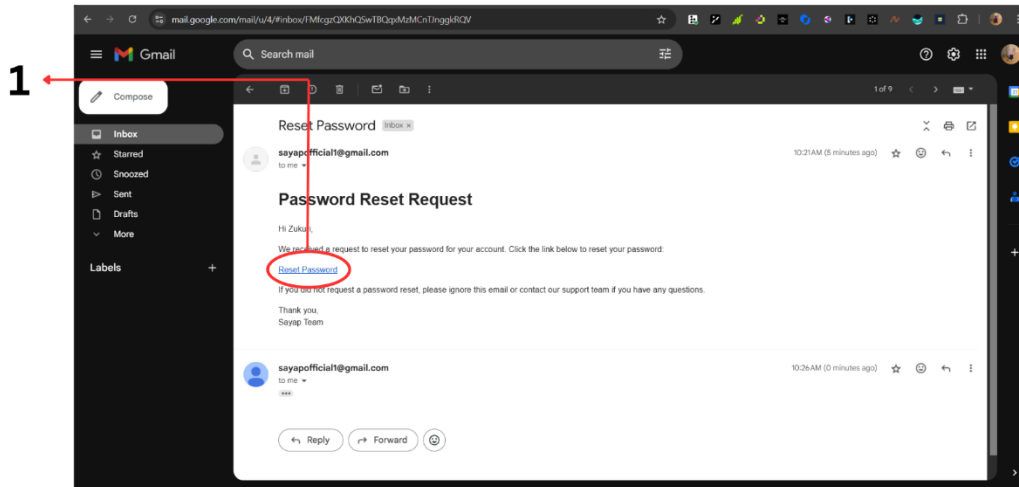

Forgot Password Form

The forgot password form is for members who have unfortunately forgotten their password.

1. Email – the user will enter their email to receive a reset password verification.
2. Send – once the user entered their email, they can click the send button to proceed.
3. Email Verification Notification – once the email sends, a pop-up notification will appear, informing the user that an email verification has been sent to their provided email address.
4. Login – for users who already have an account, they can click the login button to return to the login form.

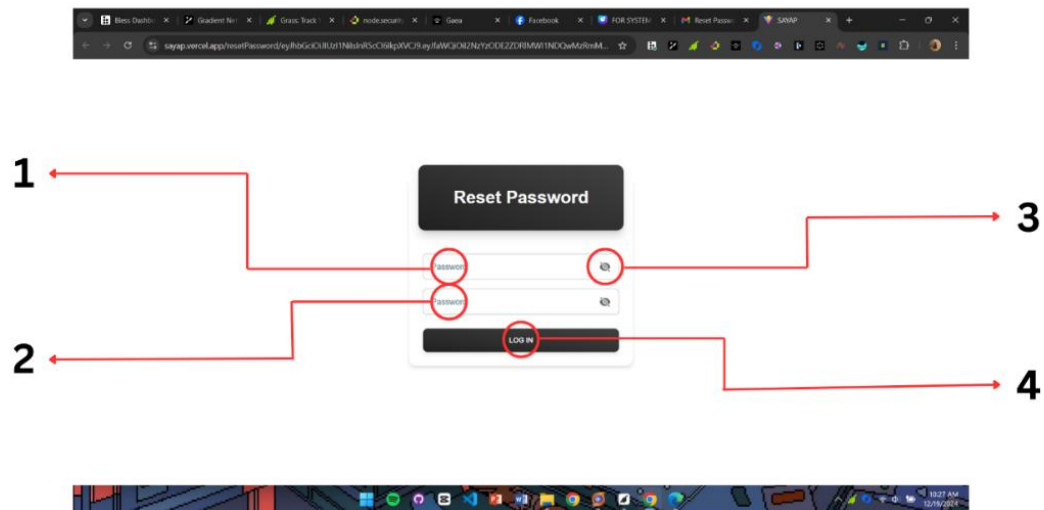

Password Reset Request

The user must check their inbox and follow the link sent to their provided email address to verify the password reset request.

1. Verify Password Reset – the user can click the provided link to complete the password reset request process.

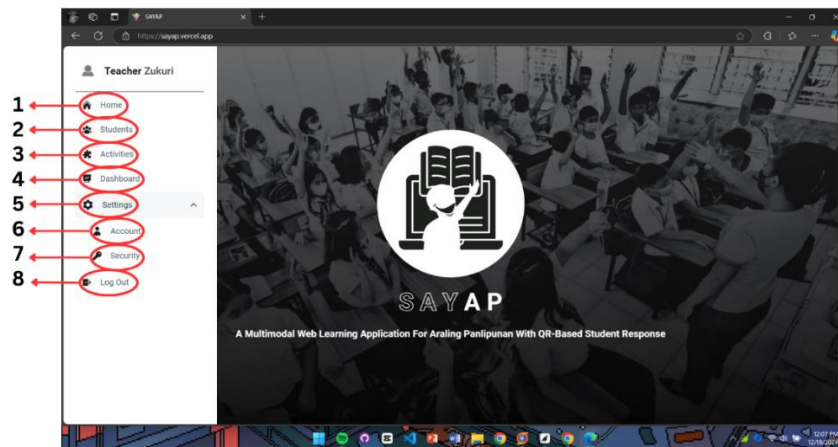

Create New Password Form

This form is for setting a new password to finalize the password change process.

1. New Password – the user will enter a new password for their account.
2. Confirm Password – the user will re-enter their new password to ensure it matches.
3. View Password – the user can click the eye icon to reveal their password as they type.
4. Submit – once the user are satisfied with their inputs, they can click the Log In button to finalize the process.

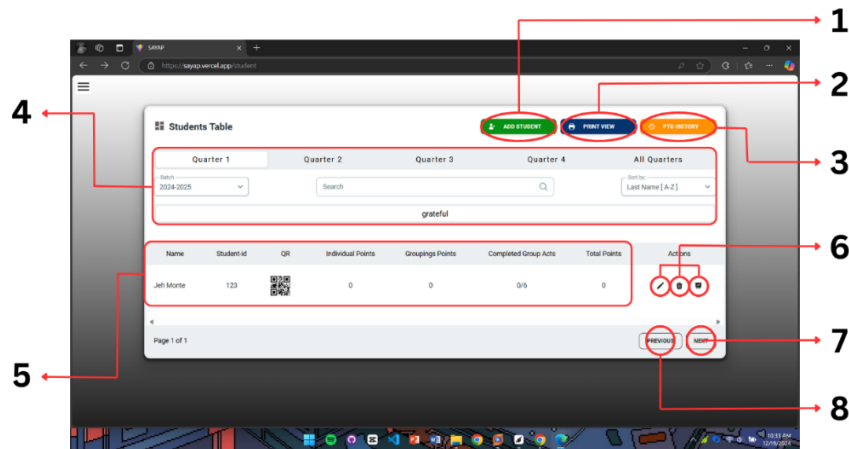

Home Page

The home page serves as the main feature of the system, offering a visually engaging experience with images and buttons that users will enjoy.

1. Home – users can click this button to navigate to the home page of the system.
2. Students – users can click this button to access the students' section where they can view and manage student information.
3. Activities – this button allows users to explore various activities associated with the system.
4. Dashboard – the users can click here to view an overview of important information and statistics.
5. Settings – this section provides users with options to customize and manage their account settings.
6. Account – the users can click this button to access and manage their personal account details.
7. Security – a section where the users can review and update security settings for their account.
8. Log Out – clicking this button allows users to securely log out of their account.

Students Page

The students page provides important functionalities for managing and viewing student information in the system.

1. Add Student – the user can click this button to add a new student to the system.
2. Print Student QR – this option allows user to print the unique QR code for students.
3. Points History – users can access this button to view the history of a student's points and achievements.
4. Quarters, Batch, Search, Name Sort – enables users to filter and organize student data by quarter, batch, name, or search criteria.
5. Student Information – displays details such as name, student ID, unique QR code, individual points, completed group activities, and total points.
6. Actions – offers options to edit student information, delete student records, or view performance analytics through charts.
7. Next Page – allows users to navigate to the next page of the student list.
8. Previous Page – provides the ability to go back to the previous page of the student list.

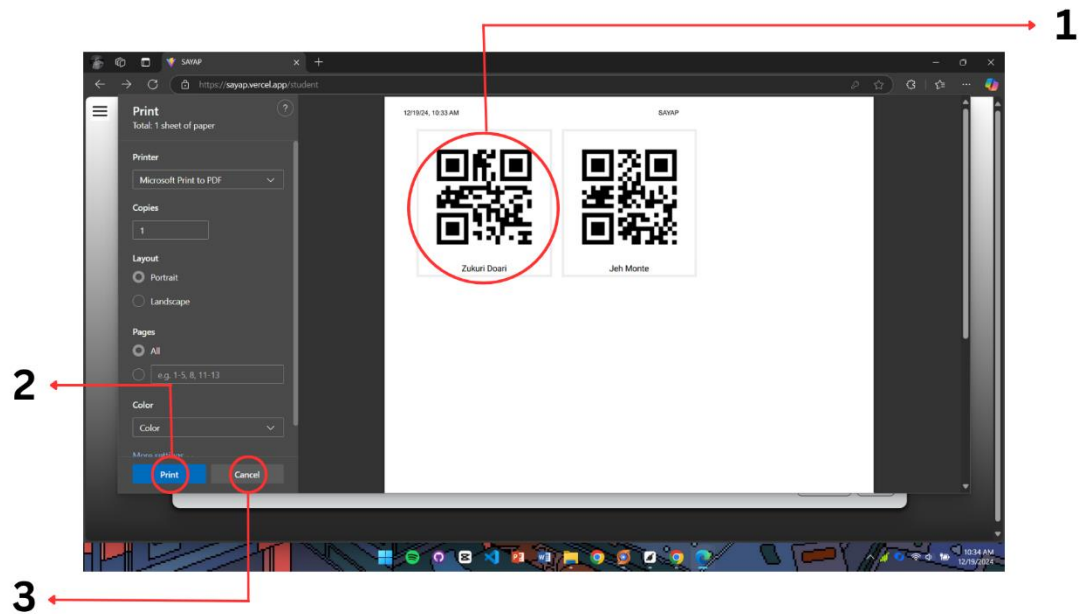

Add Student Form

The image shows a web browser window displaying the 'Add Student' form. The form is a white modal box centered on a dark background. It contains several input fields: 'First Name' (labeled 1), 'Last Name' (labeled 2), 'Student ID' (labeled 3), 'Batch' (labeled 4), and 'Section' (labeled 5). Below these fields is a 'Generate QR' button (labeled 6) and an 'Add' button (labeled 7). A QR code is displayed above the 'Generate QR' button. The 'Add' button is a green bar with white text. A small note at the bottom of the form states: 'You may click generate qr button upon filling up student id.'

Add student form allows users to easily input and manage student information.

1. First Name – the user can enter the first name of the student.
2. Last Name – the user can enter the last name of the student.
3. Student ID – this field requires the unique ID assigned to the student.
4. Select Batch – the user can choose the appropriate batch/year for the student.
5. Section – allows the user to specify the section or group the student belongs to.
6. Generate QR – the user can click this button to generate a unique QR code for the student.
7. Add Student – after filling out the necessary information, users can click the "Add" button to save the new student's details.

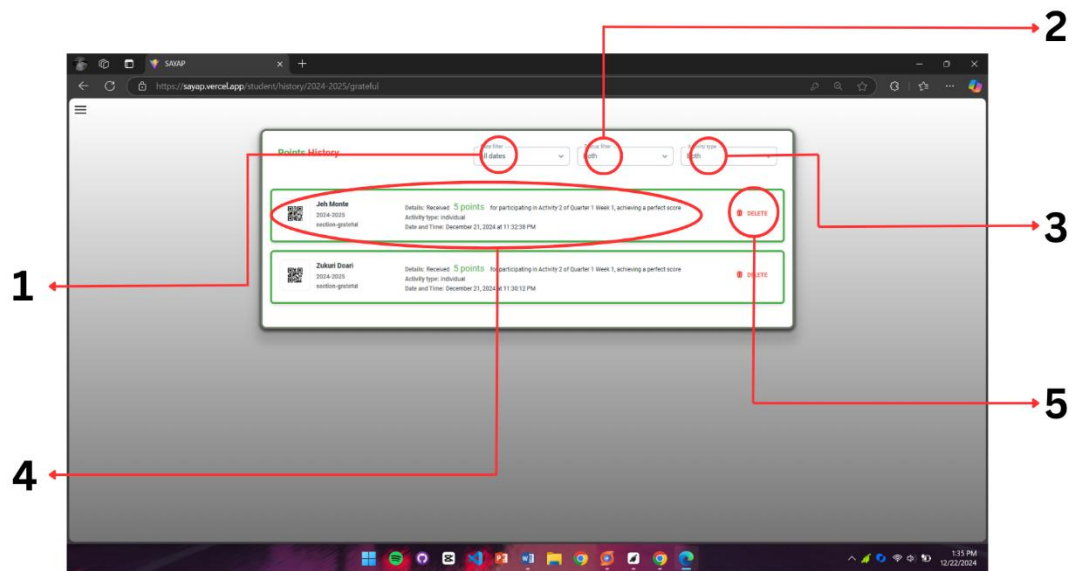

Print Student QR Code

This allows the user to generate and print individual student QR codes. The interface is intuitive, ensuring a smooth user experience.

1. QR Code – displays the student's QR code individually.
2. Print – the user can click the "Print" button to quickly send the selected QR code to their printer.
3. Cancel - if the user needs to exit or cancel the action, the user can simply click the "Cancel" button.

Points History Page

The point history page is a key feature of the system, designed to help users track and manage student performance effectively.

1. Date Filter – the user can use this option to sort the point history by specific dates.
2. Status Filter – user can select from Correct, Incorrect, or Both to filter results based on the status of activities.
3. Activity Type – the user can choose from Group, Individual, or Both to categorize the displayed activities.
4. Student Points History – the user can view detailed records of student earned points and participation details.
5. Delete Button – the user can click this button to remove specific entries from the points history when needed.

Edit Student Form

The image shows a web browser window displaying the 'Edit Student' form. The form is a white modal box centered on a dark background. It contains several input fields and buttons. Red circles and arrows point to specific elements, numbered 1 through 7. The form fields include 'First Name' (with 'Zuhair' entered), 'Last Name' (with 'Noor' entered), 'Student ID' (with '111' entered), 'Batch' (a dropdown menu showing '2024-2025'), and 'Section' (with 'grateful' entered). Below these fields is a QR code and a 'GENERATE QR' button. At the bottom of the form is a 'SAVE' button. The browser's address bar shows 'https://sayap.vercel.app/student'.

1. First Name input field

2. Last Name input field

3. Student ID input field

4. Batch dropdown menu

5. Section input field

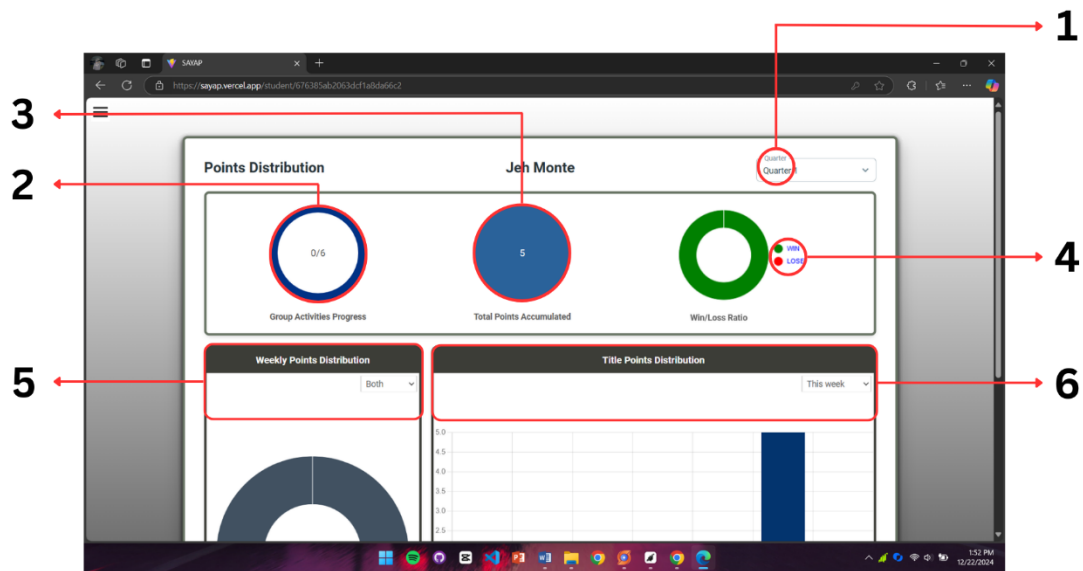

6. GENERATE QR button

7. SAVE button

The edit student form allows users to easily edit and manage student information.

- 8. First Name – the user can change the first name of the student.
- 9. Last Name – the user can change the last name of the student.
- 10. Student ID – this field can change the unique ID assigned to the student.
- 11. Select Batch – the user can choose the appropriate batch/year for the student.
- 12. Section – allows the user to specify the section or group the student belongs to.
- 13. Generate QR – the user can click this button to generate a unique QR code for the student.
- 14. Save Button – after filling out the necessary information, users can click the "Save" button to save the student's details.

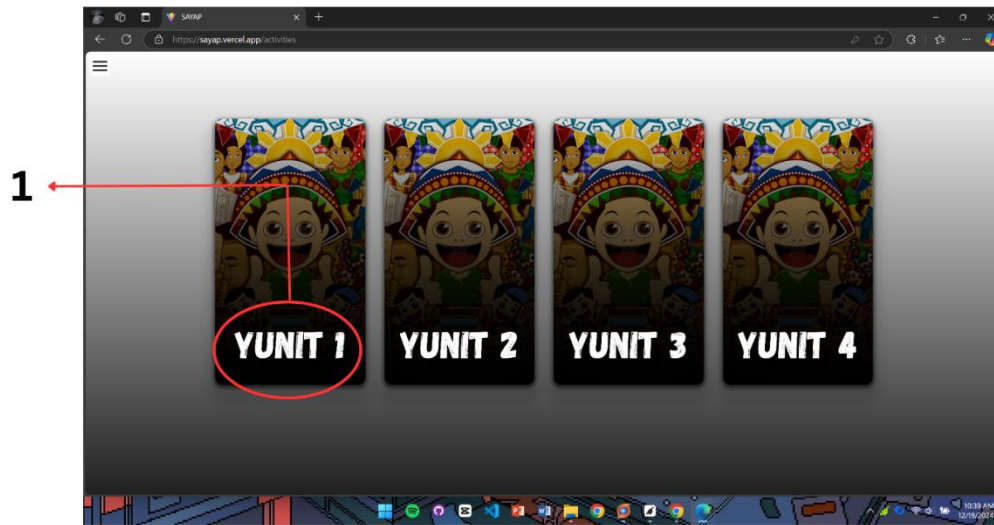

Student Chart Page

The student chart page is an interactive feature designed to provide insights into a student's performance and progress.

1. Quarter – allows users to select the time period (e.g., Quarter 1) for viewing specific performance data.
2. Group Activities Progress – displays progress in group activities, helping track achievements in collaborative tasks.
3. Total Points Accumulated – shows the total points a student has earned to date, offering an overview of their performance.
4. Win/Lose Ratio – visual representation of wins versus losses in activities, making it easy to assess overall success.
5. Weekly Points Distribution – breaks down points earned over the week, helping monitor consistent participation.
6. Title Points Distribution – shows the distribution of points earned for specific titles or tasks within a selected time frame.

Yunit Selection Page

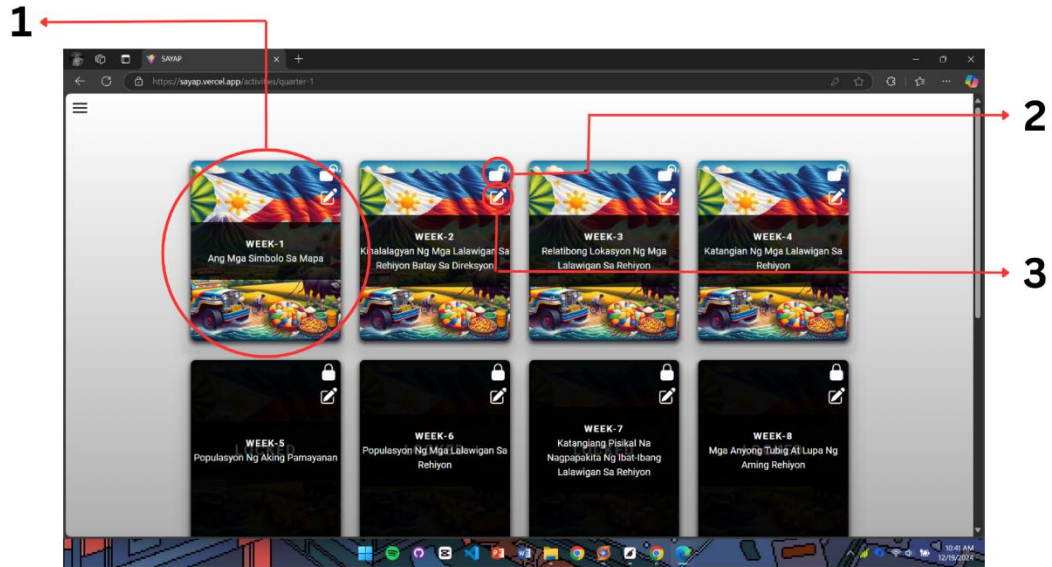

The unit selection allows users to choose units based on their availability and schedule.

1. Yunit – the user can select from “Yunit 1” to “Yunit 4” based on the time period.

Each units has different weeks and topics for the user to select.

Weekly Activities Page

The weekly activities are a practical feature that helps users manage and customize weekly activities.

1. Weeks – allows users to select a specific week for viewing or managing activities.
2. Lock/Unlock Specific Week – provides the option to restrict or enable access to activities for a selected week.
3. Edit Week – enables users to modify details or settings for a particular week's activities.

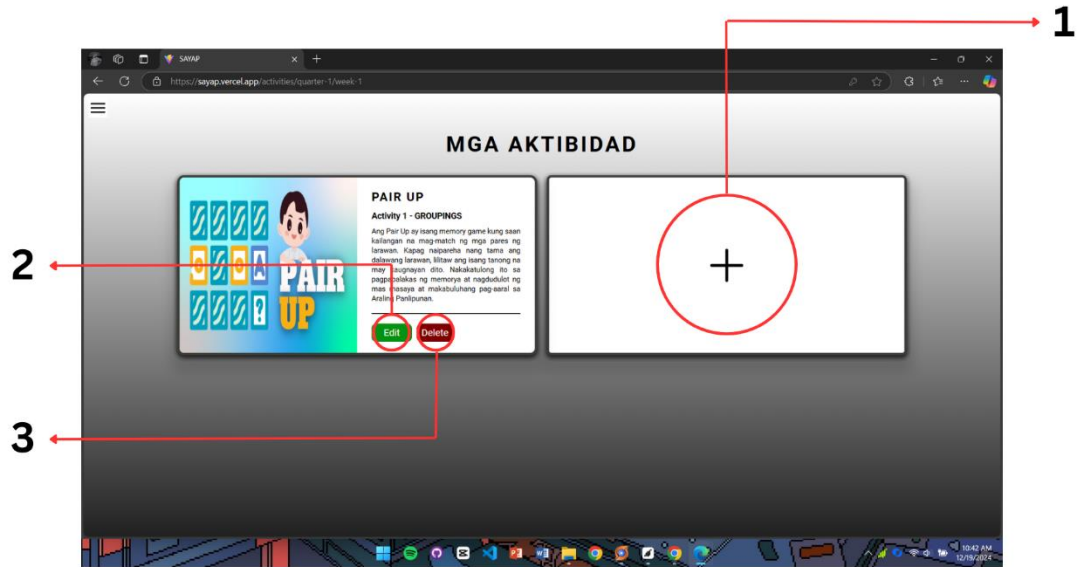

Edit Activity Form

The screenshot shows a web browser window with the URL <https://sayap.venelapp.com/activities/quarter-1>. A modal window titled "Edit Activity" is centered on the screen. It contains two input fields: "Week number" (a dropdown menu) and "Lesson title" (a text box). Below these fields is a black button labeled "EDIT". Red circles highlight the "Week number" dropdown, the "Lesson title" text box, and the "EDIT" button. Red arrows point from numbers 1, 2, and 3 to these elements respectively. The background shows a grid of activity cards.

The edit activity form is a user-friendly tool for updating and managing specific activity details.

1. Week Number – a drop-down field for the user to specify or update the week associated with the activity.
2. Lesson Title – the user can update the title of the lesson for better clarity or organization.
3. Edit Button – the user can click this button to confirm and save the changes made to the activity details.

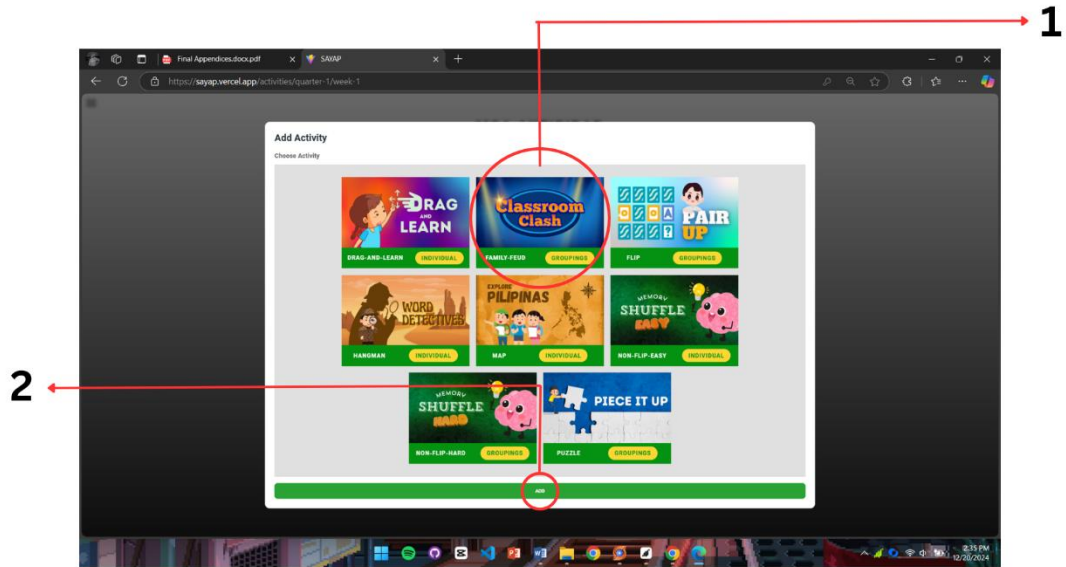

Activities Page

The activities page is designed to help users manage games and activities efficiently.

1. Add Game – this allows the user to create and add new games or activities to the system.
2. Edit Game – it enables the user to update or modify the details of an existing game or activity.
3. Delete Game – provides the option to remove a game or activity from the system permanently.

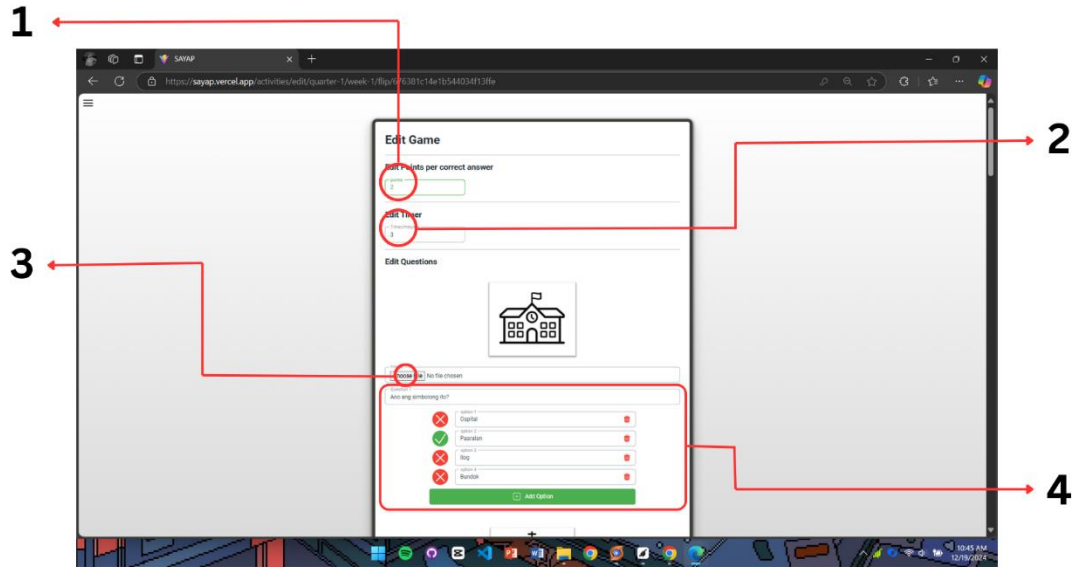

Add Game Form

The add game form allows users to select and add new games to the system with ease.

1. Games – the user can choose of variety of engaging games, including: Drag and Learn, Classroom Clash, Pair Up, Word Detectives, Explore Pilipinas, Memory Shuffle (Easy), Memory Shuffle (Hard), and Piece It Up.
2. Add Button – the user can click this button to confirm the selection and add the chosen game to the system.

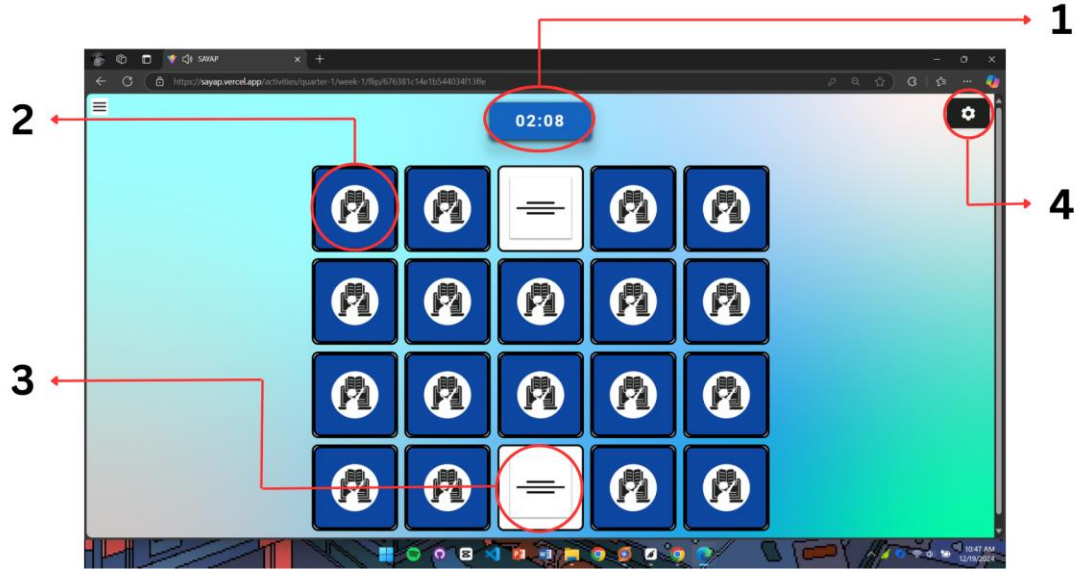

Edit Game Form

The edit game form provides tools to customize game settings and enhance user engagement.

1. Edit Points – enables the user to set or update the number of points awarded for each correct answer.
2. Edit Time – the user can adjust the time limit for the game, measured in minutes.
3. Choose Picture – the user can upload or change pictures by selecting files from the file explorer.
4. Edit Question, Options, and Save Button – this can make the user modify game questions and their options, then click the “Add Option” button to apply and confirm changes.

Pair Up Game

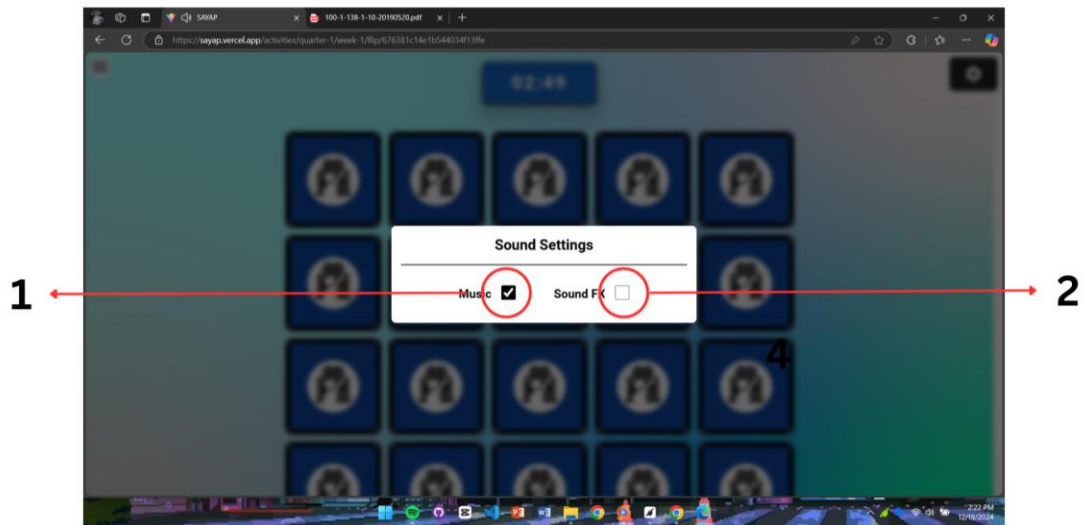

Pair Up is a memory game where players need to match pairs of images.

Once two images are correctly paired, a related question will appear.

1. Timer – tracks the time remaining to complete the game.
2. Card Flip Backward – indicates cards that have not yet been answered.
3. Card Flip Forward – indicates cards that have already been answered.
4. Settings – allows players to adjust the sounds configurations.

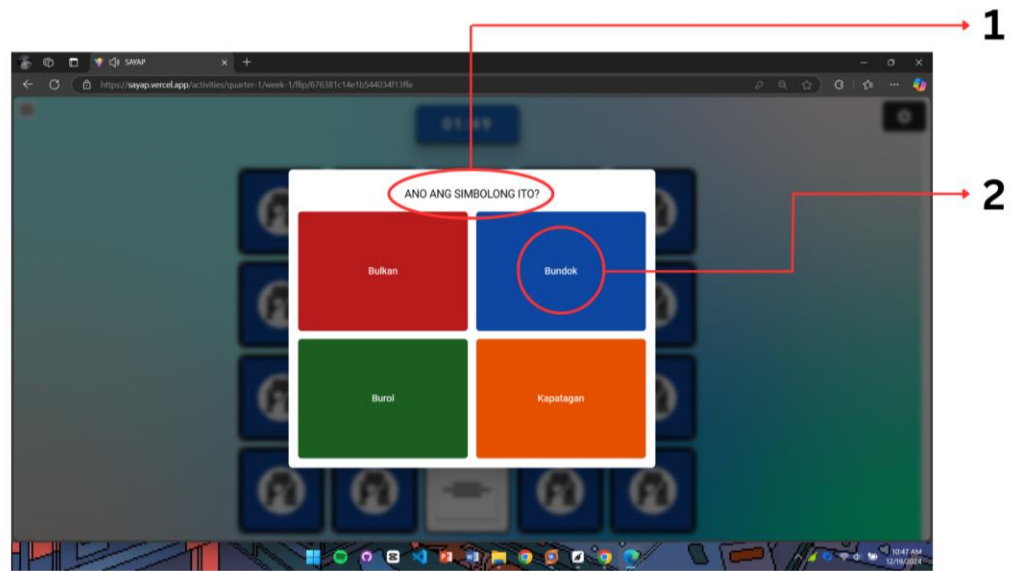

Sound Settings

The sound settings can let the students or teachers to choose if they want to enable or disable the sounds.

1. Music – the users can enable or disable the Music of the game.
2. Sound FX – the users can enable or disable the Sound FX of the game.

Multiple Choice

After the players correctly paired the two images, this related question of the image will pop up.

1. Question – a related question of the image will ask the student.
2. Multiple Choice – if the student select the wrong answer, the timer will reduce, but if the student select the right answer, the pair up game will continue.

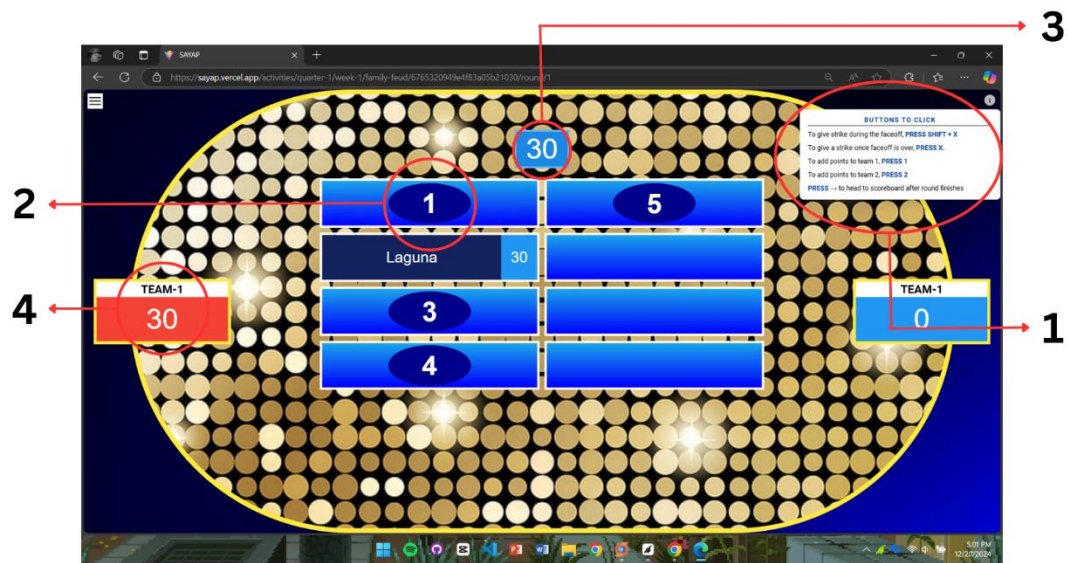

Drag And Learn Game

This interactive game helps players learn by matching words to their corresponding images. Simply drag a word to the image it belongs to and see if you've made the right connection. It's a fun way for students to understand the topic more deeply. Every wrong match will take away one of your correct answers.

1. Timer – the timer shows how much time is left to finish the activity, helping players stay on track and complete the challenge before time runs out.
2. Words – players can drag and drop words to match them with the right images. This makes the activity engaging and helps them sharpen their matching skills.
3. Images – a variety of pictures are displayed, and players need to pair each one with the correct word, making the activity fun and interactive.

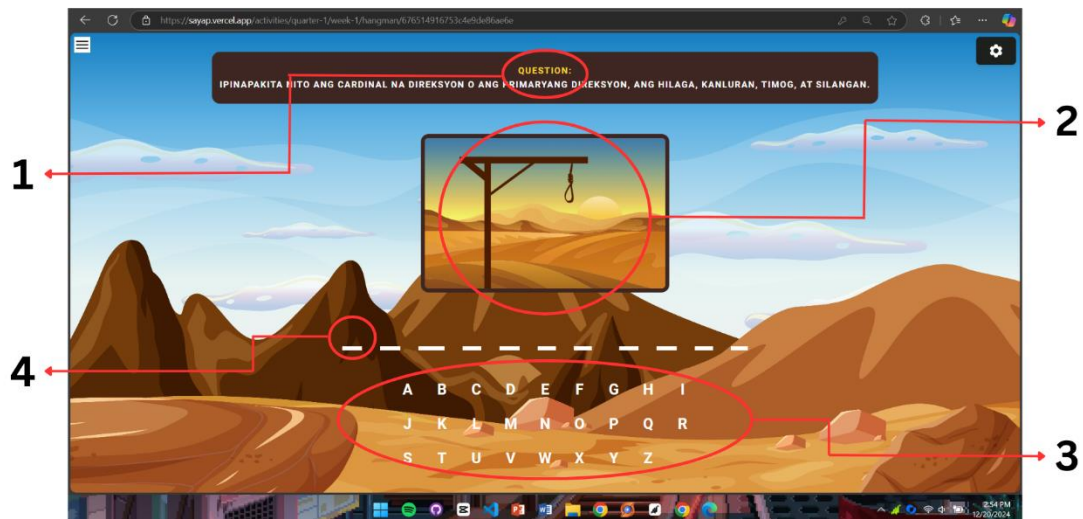

Classroom Clash Game

Inspired by the classic Family Feud, Classroom Clash is an exciting game where players compete to identify key information from school lessons.

1. How to Play Information – the teams take turns answering questions related to their lessons. The goal is to guess the correct answers based on the topic provided.
2. Flip Box – reveals whether the team's answer is correct or not.
3. Points – teams earn points for every correct answer, adding an extra layer of competition and excitement.
4. Teams – the game is played by two teams competing to win the most points.

Word Detectives Game

Inspired by the classic Hangman game, Word Detectives challenges players to solve hidden words based on a given question. Students select letters to complete the answer, sharpening their vocabulary and critical thinking skills along the way.

1. Question – a question or hint appears at the top, helping players figure out the word related to the topic.
2. Hangman – the classic hangman drawing starts to take shape with each wrong guess, making the game more thrilling.
3. Letters – players pick letters from the alphabet to try and reveal the hidden word.
4. Right Answers – correct guesses fill in the blanks, bringing players closer to completing the word and winning the game.

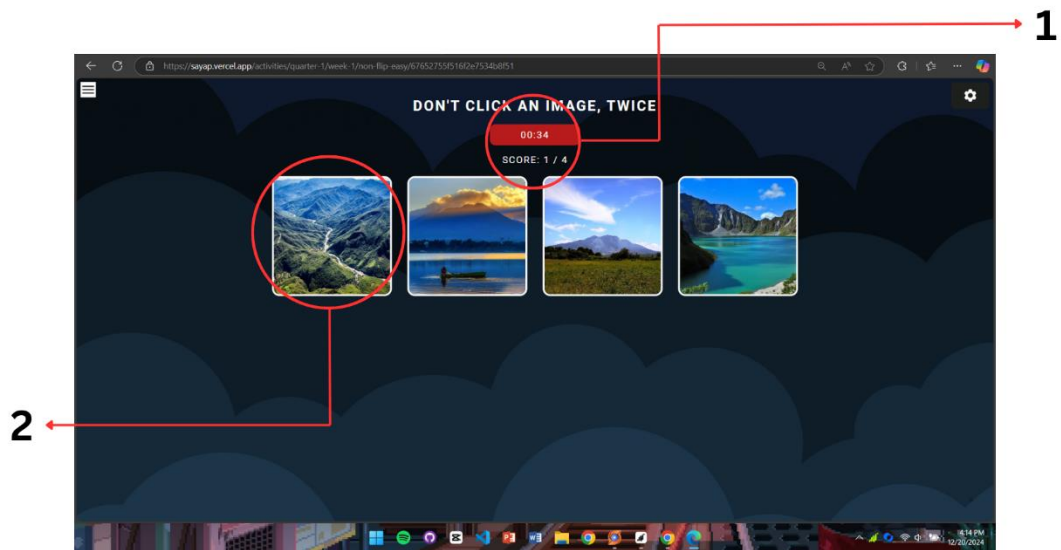

Explore Pilipinas Game

This interactive map of the Philippines allows players to explore different cities and provinces. By selecting a location, they can watch a 3D video that highlights the area's history and culture. After the video, players answer questions to test and deepen their understanding.

1. Select Location – players choose a place to explore based on the given topic or their area of interest.
2. Location Map and Video Button – displays the map of the selected area, with a button to start the video and begin the journey.
3. 3D Anaglyph Video – an immersive video experience that brings the history and culture of the chosen location to life.
4. Question – players answer questions about the video, helping them retain and reinforce what they've learned.

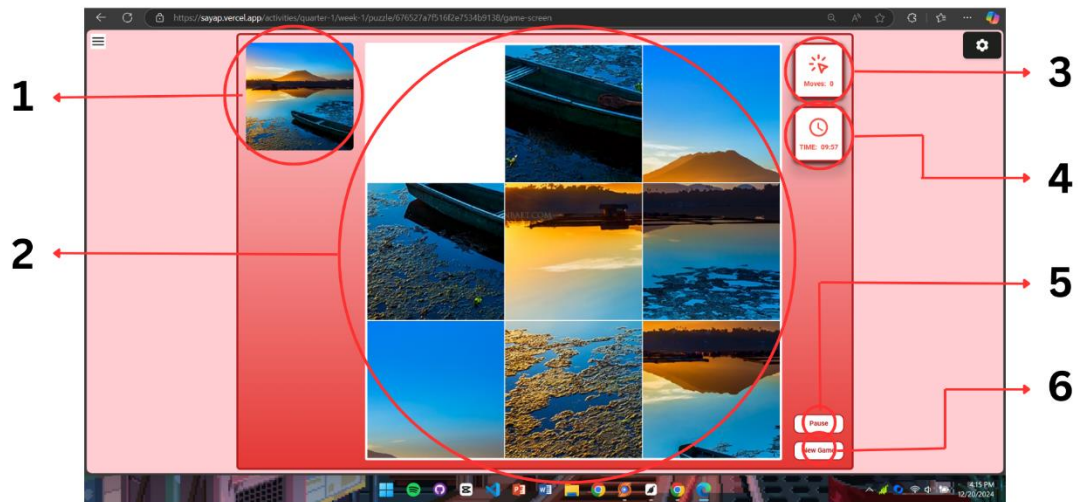

Memory Shuffle Game

This engaging and challenging game encourages players to test their memory by recalling the shifting positions of images. The objective is to avoid selecting the same image more than once while successfully clicking through all the images.

1. Timer and Score – the game keeps track of the remaining time and the player's score, motivating them to stay focused and aim for a higher score.
2. Images – players must concentrate and remember which images they've already clicked to avoid repeating selections and to keep progressing in the game.

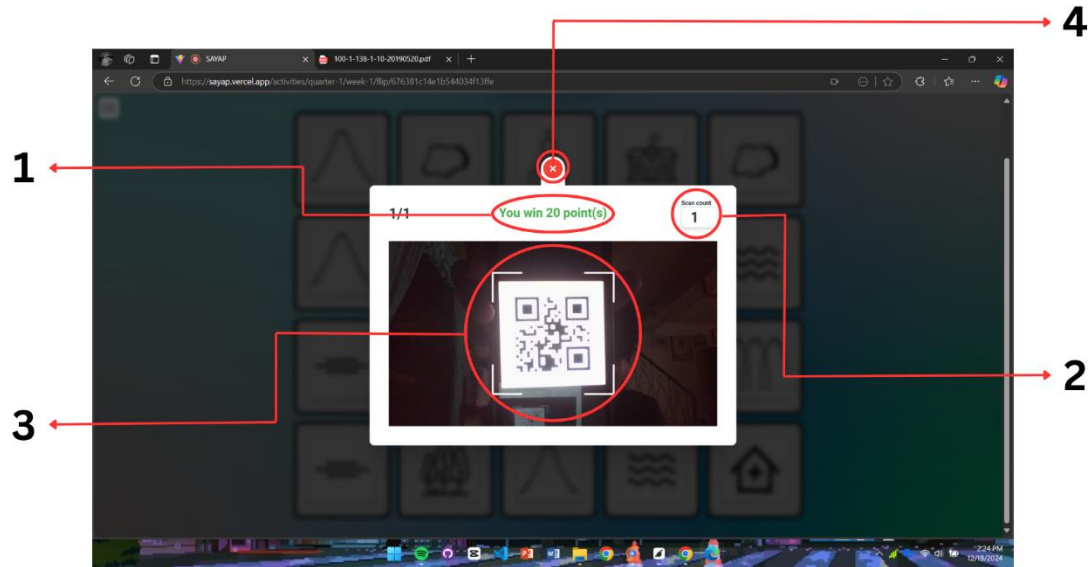

Piece It Up Game

This interactive puzzle game blends entertainment and education by challenging players to piece together a scrambled image while answering questions tied to their lessons. Every five moves, a question appears, helping players connect the image with the topic and enhance their understanding.

1. Image – the full picture players work to recreate by solving the puzzle.
2. Puzzle – the image is broken into shuffled pieces that players must rearrange to complete the challenge.
3. Moves – keeps track of how many moves players have made, adding an element of strategy to the game.
4. Timer – shows how much time is left to complete the puzzle, keeping players focused and motivated.
5. Pause Button – allows players to pause the game and take a break if needed.
6. New Game Button – refreshes the challenge by starting a new puzzle for players to solve.

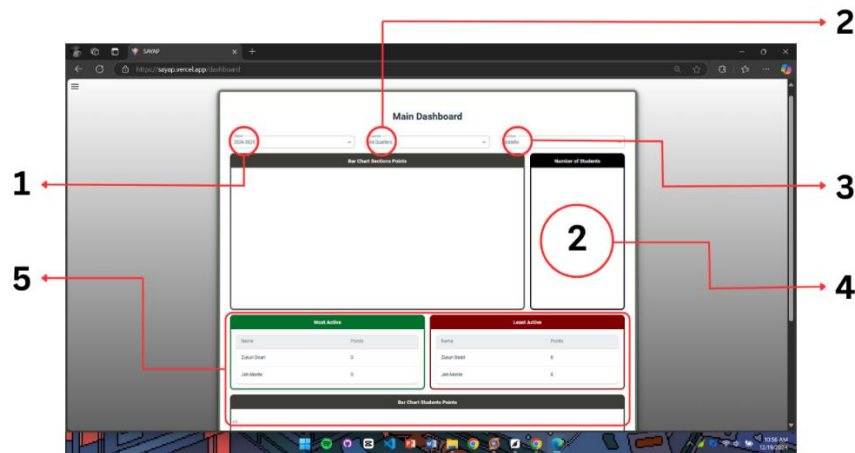

QR Code Points

The QR code scanner is a important feature of the system, designed to provide students with an engaging and rewarding experience.

1. Points Earned – this displays the number of points gained after successfully scanning a QR code.
2. Scan Count – this feature tracks the total number of QR codes scanned during the session and the user can change this based of the students that need to be scanned.
3. QR Code Scanner – this interactive scanning interface allows students to scan their QR code to earn points in real-time.
4. Close Button – allows users to exit the QR code scanner and return to the main interface.

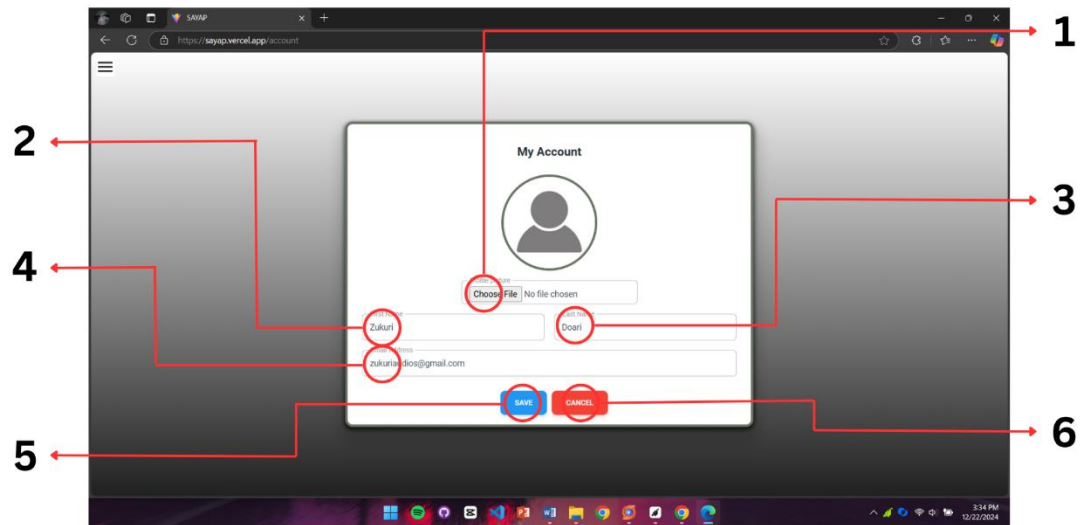

Dashboard Page

The dashboard page serves as the central hub of the system, offering key insights and interactive elements for users.

1. Batch Selector – enables the user to choose a specific academic or program batch for streamlined data display.
2. Quarter Selector – allows the user to filter data by the desired quarter or time frame for precise analysis.
3. Section Selector – lets the user select a specific section to view relevant data and performance metrics.
4. Number of Students – displays the total number of students in the selected section, batch, or quarter.
5. Performance Insights:
 - Section Points - shows the cumulative points earned by each section.
 - Most Active Students - highlights the top-performing students based on activity or points.
 - Least Active Students - displays the students with the lowest activity or points.

Account Settings Page

The account settings page is where the user can edit their account.

1. Choose Profile – the user can change their profile picture by choosing file in file explorer.
2. First Name – the user can change their first name.
3. Last Name – the user can change their last name.
4. Email – the user can change their email address and verify the email.
5. Save Button – the user can click this button to confirm the changes they made.
6. Cancel Button – allows users to cancel the changes they made in their account.

Security and Password Page

The image shows a web browser window displaying the 'Security and Password' page. The page has a dark background with a white modal form in the center. The form is titled 'Security and Password' and contains a 'Change password' section. Five red circles with arrows point to specific elements, numbered 1 through 5. 1 points to the email field, 2 points to the old password field, 3 points to the new password field, 4 points to the confirm password field, and 5 points to the save button. The browser's address bar shows 'https://sayap.vercel.app/security'. The Windows taskbar is visible at the bottom.

1

2

3

4

5

The security and password page is for the user who have wanted to change their password.

1. Email – this is the email that provided by the user.
2. Old Password – the user will input the old password to create a new password.
3. New Password – user creates a new secure password that meets the system's guidelines.
4. Confirm Password – the user re-enters their new password to ensure it matches the one they created.
5. Save button – the user can click this button to confirm the changes they made.
